Surface Preparation and Pretreatment

Ensure surface to be painted is clean, dry and intact, if necessary use a high performance solvent cleaner e.g. DeSoto® CN20 or Desoclean™ 45 solvent cleaner. When required, lightly abrade using P240-P320 sand paper (mechanical sander) or P400 (hand abrade). Remove abrasive residue/dust using tack cloth, then solvent degrease.

Instructions for Use

Base may require mechanical agitation. Prior to mixing, mechanically shake the base component for 10-15 minutes until homogeneous. Stir activator by hand then add to base. Stir mix thoroughly until uniform.

Note : All product components should be allowed to condition at temperatures of 15 – 30°C (59 – 86°F) for a minimum of 24 hours prior to mixing and application.
